## Data Dictionary

### resource

*All of the data below comes from our internal production database.*

| Field                         | Format | Definition  |
|-------------------------------|--------|---|
| resource_hashed_id 🔑          | string | Unique resource identifier.   |
| project_hashed_id <b>(FK)</b> | string | Unique project identifier.  |
| resource_clean_item_name      | string | The name of the resource we get from vendors, stripping away excess punctuation and spacing.  |
| resource_quantity             | float  | The quantity of the resource the teacher requested.   |
| resource_unit_price           | float  | The unit price of the resource.   |
| resource_predicted_category   | string | The output of a model we built in house that predicts the category of each resource. We're still tuning this model so the accuracy varies greatly across different categories, (we're generally better at predicting what falls under "Computers & Tablets," versus "Lab Equipment.") |
